

# Paint Push-Out System

The most expensive consumable commodity  
in a paint shop is paint.

Ritchie Automation's Paint Push-Out System can save  
up to 75% of the paint that is typically wasted during  
color changes.

Our unique system works with flowmeter &  
regulator, or gear pump systems – 2K or 1K.

This PLC based system offers quick ROI  
based on paint savings and the additional time  
saved by the reduction in color change times.

Incorporates into your existing or new Allen-Bradley ControlLogix PLC.

Paint Cost Per Gallon = \$150  
Paint Waste @ Color Change = 483 cc  
Paint Push-Out Savings = 75%

**Annual Cost Savings = \$143,437**

ROI based on 20 color changes per shift, 2 shift operation, 2 spraying stations, and a 25 foot, 1/4" ID fluid hose.
